

BLACK-PAINTED EXTERIOR PANELS

Black-painted exterior panels, surface-treated with Pinja Wood Stain fast-drying wood oil and Pinjalack HB TCX.

- Pinja Wood Stain Fast-drying wood oil.
- Pinjalack HB TCX Flexible, single-component, water-based acrylate top coat for outdoor use.

We use a modern exterior paint system consisting of an impregnation oil and acrylate top coat. Important characteristics in the development of these products is their durability in outdoor environments.

Pinjalack HB TCX - Top coat for outdoor panels

The product contains alkyd, which improves the adhesion to untreated wood. The fast-drying composition in the colour contributes to the stackability of the panels being substantially improved.

The paint protects the surface against dirt, moisture and sunlight. The extremely low water absorption reduces the risk of cracking due to the wood swelling.

Pinja Wood Stain

Fast-drying clear, primer oil that penetrates into the wood and protects against moisture, sunlight and dirt. Reduces the risk of cracking and tinting in the Akvi Tone tinting systems.

Painting system

Industrial primer: Pinja Wood Stain.

Finishing coat: 1 coat with Pinjalack HB TCX.

Recommended finishing coats:

Beckers Perfekt Alternatively, other commercially available paint for panelling.
